## What Is Tramadol 100mg?

Tramadol 100mg is a prescription medication primarily used to manage moderate to severe acute and chronic pain. It belongs to the class of opioid analgesics, acting on the central nervous system to relieve pain. Tramadol 100mg works through a dual mechanism: it binds to opioid receptors to reduce pain perception while also inhibiting the reuptake of norepinephrine, which enhances analgesic effects.

Healthcare providers may prescribe Tramadol 100mg for:

- Chronic pain conditions that require long-term management
- Pain following surgical procedures
- Neuropathic pain or other conditions where traditional analgesics are insufficient

Because Tramadol 100mg is a controlled substance, it is essential that it is taken under proper medical supervision to minimize risks of dependence, misuse, or adverse reactions.
